SUMMARY

3D Artist and Game Developer with hands-on studio experience spanning Unity game development, Blender 3D modeling/rigging, web-optimized technical art pipelines, and 2D character animation in Spine2D. Proficient in C# programming, level design, and cross-team collaboration between art and engineering across a 9-month technical art contract at SoraMinds LLC, a level design internship at Yunecko Studios, and an ongoing animation internship at Solano Games. Seeking a Game Developer / 3D Technical Artist role.

EDUCATION

•Bachelor of Computer Application (AI/ML)

Sushant University, Gurgaon

2023-2026

CGPA: 7.5/10.0

EXPERIENCE

•Solano Games

June 2026 – Present

2D Character Props Artist (Krita) & Spine Animator – Intern

Remote

- Design and edit 2D character props, costumes, and accessories in Krita, preparing clean, rig-ready art for the Spine2D character pipeline.
- Rig and animate 2D characters in Spine2D, building skeletal animations for character movement, expressions, and in-game interactions.
- Collaborate with the art and development team to keep prop art and animation style consistent across the character roster.

•SoraMinds LLC

Nov 2025 – Jul 2026

3D Designer → Junior Technical Artist / Pipeline Engineer – Contract

Troy, MI, USA (Remote)

- Managed strict draw-call budgets and minimized GLB file sizes for seamless frontend rendering; applied texture channel-packing (OMR: Occlusion, Metallic, Roughness) to reduce memory bandwidth on web-based AI agents.
- Led technical rigging and precision weight painting for character assets; engineered facial shape keys – eye blinks and lip-sync visemes – and streamlined workflows through the NLA editor.
- Acted as primary technical liaison between the 3D art team and frontend developers, maintaining a consistent semi-realistic, mid-poly art direction while preventing code-breaking mesh issues.

•Yunecko Studios

Jul 2025 – Oct 2025

Unity Junior Developer & Level Designer – Internship

Dehradun, India (Remote)

- Architected 40+ levels for the 2D platformer “Adventures of Slime” in Unity, shipping the title on Google Play.
- Created 60+ Blender blueprints to plan spatial layout and visualize gameplay flow before implementation.
- Ran a comprehensive QA process – identifying and documenting 30+ bugs and performance issues – and iterated on level design with the remote dev team based on test feedback.

PROJECTS

•DeathNight Zombies

First-Person Shooter Game | GitHub

- Built an immersive first-person shooter with intelligent enemy AI using NavMesh pathfinding and the Unity engine.
- Programmed weapon switching, raycasting-based shooting, and collision detection for responsive combat.
- Engineered enemy behavior patterns with state machines and optimized performance for smooth gameplay with multiple AI agents.

•Basket Blast 3D

Physics-Based Basketball Game | GitHub

- Built a physics-based basketball simulation in Unity with multiple difficulty modes, scroll-based force controls, and realistic ball trajectory physics.
- Added wind effects, moving targets, particle effects, and audio feedback for a polished, replayable player experience.

Additional projects (AR Planets – ARCore solar-system app, Snowman Runner, PUN Multiplayer) and 3D art/animation work available at my portfolio.

TECHNICAL SKILLS

Programming: C#, Python, Object-Oriented Programming

Game Development: Unity 3D/2D, Level Design, NavMesh AI, Raycasting, Physics Simulation, Particle Systems, Photon Multiplayer (PUN), ARCore

3D Art & Technical Art: Blender (Modeling, Rigging, Weight Painting, Shape Keys, NLA Editor), Substance Painter, GLB/gLTF Pipeline, Texture Channel-Packing, Draw-Call Optimization

2D Art & Animation: Krita, Spine2D (Rigging & Animation), Canva

Machine Learning: TensorFlow, RAG

Tools & Platforms: Git Version Control, Visual Studio, Windows/Android/WebGL Deployment

CERTIFICATIONS

Nexify 2025 Hackathon – Certificate of Participation (24-Hour), ZENITH, Sushant University

April 2025
